The cutting tools necessary for manufacturing smartphones, tablets, aircraft, cars and medical devices are high-tech products made on high-precision machines with high-performance software. Rollomatic designs, manufactures, markets, and maintains these production systems worldwide with nearly 350 employees.

THEME OF THE WORK:
“Algorithms for machining surfaces and edges based on implicit data”

YOUR PROFILE:
• Master student, oriented towards software development and mathematics and looking for a part-time/full-time position as an intern
• Good knowledge in software development and object-oriented programming
• Strong interest in domains such as 3D computational geometry or numerical analysis
• Motivation for engineering application in the heart of Swiss-made high-precision industry

YOUR MISSION:
• Define geometrical representations of grinding operations using innovative frameworks and methods
• Generate trajectories to control machine axes during grinding
• Implementation of these concepts in C# or another programming language
• Collaborate with different teams within the company

OPPORTUNITIES:
• This internship project offers you the opportunity to immerse yourself in a unique environment that combines industrial aspects, the development of advanced applied mathematical methods and their implementation
• You will be integrated into a team of professional software developers and mathematicians, following modern agile working methodologies
• Your research and development work brings significant added value to our software solution for our users, contributing to the improvement of core algorithms
• Finally, this research work can possibly continue with a Master thesis, PhD project or employment at Rollomatic

PLACE OF WORK:
• Your workplace will be shared between Rollomatic Headquarter (Le Landeron) and one of our innovation cells: EPFL Innovation Park or Swiss Innovation Park Biel/Bienne
• Partial remote work possible

Application deadline: 31.12.2022
