Rollomatic launches a new wave of tool grinding productivity at IMTS 2020

Mundelein, April 2020. Rollomatic, a leading machine tool manufacturer based in Le Landeron, Switzerland, is exhibiting at the IMTS (International Manufacturing Technology Show) in September in Chicago, IL.

Rollomatic continues the success and growth of its software development VirtualGrindPro which runs the multi-axis GrindSmart® series of tool & cutter grinding machines by announcing that, in addition to the already extensive tool diversity, further tool geometries have been incorporated such as inserts, boring bars, rotary burs, taps and much more. Rollomatic’s strategy with this expansion is based on helping operators and programmers to facilitate an environment of efficiency and collaboration within the user’s organization. This powerful software offers the highest possible speed, ease-of-use and flexibility.

In addition to the software expansion, the 3-dimensional simulator has been updated with a faster and more accurate version. The impressive stability and instantaneous rendering of 3D images will enable users to save valuable programming time and effort.

- New 3D simulator 7.0 with increased calculation speed and optimized rendering quality
- “Center-of-mass” calculation for balanced tool design
- Floating license for new 3D simulator
- VGPro for high-performance endmills with variable helix including ballnose, corners and tapers
- VGPro for helically, sheared and straight form tools and profile inserts
- VGPro for drills and step drills, including variable helix
- Insert, boring bars, cutting taps, thread endmills, rotary burs and more
- Rollomatic connectivity programs RMonitor and RConnect as cockpit dashboard or for connection to existing ERP’s

Rollomatic provides outstanding service/support from its North American headquarters in Mundelein, IL, and satellite offices in CA, FL, IN, MA. For more information visit: www.RollomaticUSA.com or e-mail solutions@RollomaticUSA.com.
